

FRANCO SILVESTRI

HR BUSINESS PARTNER | WORKFORCE PLANNING & PEOPLE ANALYTICS | HR PROCESS INNOVATION

fransilvestri95@gmail.com | Buenos Aires, Argentina | [linkedin.com/in/fransilvestri95](https://www.linkedin.com/in/fransilvestri95)

I am a Human Resources professional, currently in my 4th year of a Bachelor's degree in Human Resources (Universidad Argentina de la Empresa), taking my last 4 classes, with experience acting as a strategic business partner to leaders and global stakeholders, combining Workforce Planning, performance management, People Analytics, and employee engagement across global corporate environments and multidisciplinary teams.

In my current role as Staffing & Deployment Senior Associate at PwC (Acceleration Center), I act as a strategic business partner to Engagement Managers (client partners) in the allocation of U.S. resources, serving as a point of contact with weekly tracking of availability, hours, and utilization, and I collaborate directly with my manager on workforce planning for all levels, including Manager and Director levels. I have full ownership of project staffing and workforce planning for interns, entry-level and Senior employees, including welcome meetings and periodic 1:1 check-ins on their project and client experience, and I act as the HR point of contact for time-tracking, project calendars, and leave/absence management. On the performance management side, I design and implement improvement plans, hold 1:1 feedback and professional development meetings, and take part in performance evaluations and promotion decisions; I also run KPI analysis on utilization and define corrective actions together with managers. To support data-driven decision-making, I created a Power BI dashboard used in team meetings with Partners (Client Services) to track capacity and utilization, designed another that suggests assignments based on each employee's available free hours (saving 4 hours a month), and built an Excel tool (Macros/VBA) that automatically assigns resources to client projects (saving 10 hours a month).

As a volunteer, I lead employee engagement and capability-building initiatives within PwC's Power Up Crew: on the Bonding & Recognition team, I drive team and culture events end-to-end (in-office birthdays, virtual bonding with the Mexico team), coordinating a team of junior volunteers and managing vendors, and I created and implemented a recognition plan along with its annual event at fiscal year-end close; on the Innovation team, I act as the technical lead on Excel and Power BI, designing a progressive training calendar with its practice materials. These initiatives reflect my orientation as a business partner: generating impact on culture and people development beyond my formal responsibilities.

Previously, as a Talent Architecture Analyst at Accenture, I built a Power BI dashboard for the Talent and HRBP team that enabled dynamic visibility into role and role-family updates, previously maintained in slides, and managed the global role catalog in Workday (descriptions, skills, levels, and metadata). I fulfilled the Product Owner/Scrum role, managing the backlog and defining user stories, took part in recruiting initiatives (screening and interviews) and in training and facilitation, and contributed to continuous improvement through documentation and process standardization (SOPs). This combination of experience has allowed me to develop a comprehensive view of the talent lifecycle and a strong ability to translate business needs into actionable HR solutions, exactly what is expected of an HR Business Partner.

In terms of technical skills, I have advanced proficiency in Excel and Power BI, and intermediate level in VBA and Power Query, as well as concrete experience with Workday HCM, reporting, Copilot Studio, and collaborative tools (Azure DevOps, SharePoint). Regarding soft skills, I highlight stakeholder management, business partnering, workforce planning, performance management, employee relations, people analytics, employee engagement, event and vendor management, instructional design, and coordination of global virtual teams. I also have an advanced level of English (C1). I am especially motivated by the possibility of growing in an HR Business Partner role where I can:

Support business leaders as a strategic partner in managing their teams' talent and performance. Drive data-driven decisions (People Analytics, utilization metrics, performance, etc.) that generate measurable impact. Contribute to building a strong organizational culture through engagement initiatives, recognition, and continuous improvement of HR processes.

I am available to provide further information and to participate in an interview where I can detail how my profile, as an HR Business Partner, can add value to your organization.
